10 Files and templates

Volt Streaming is a live-first streaming platform: live channels, live events, radio, FAST and loops, with recordings that turn into a media library and a library that turns back into a channel. The brand comes from the room it is used in. Operators sit in a dim control room watching signals, so the identity is dark, calm and precise, with one bright current running through it: the Volt blend, from Volt Blue to Volt Indigo.

Use this system for everything that carries the Volt name: the product UI, documentation, solution and architecture diagrams, slide decks, proposals, advertising, social posts and the website. The font guide, icon guide and the diagram and marketing rules are separate sections of this book.

01

The brand and its voice

Name

- Write **Volt Streaming** on first mention in any document, page or ad. After that, **Volt** on its own is correct.
- Always title case: `Volt`, never `VOLT`, `volt` or `VOLT Stream`. All caps is reserved for eyebrows and status pills, where the whole line is uppercase anyway.
- The descriptor, when one is needed under the name, is **Live streaming platform**.
- Never use earlier working names in anything new.
- Product areas keep their UI names, in title case when they are a place in the product and sentence case in running text: Live Channels, Live Events, Radio, FAST, Loops, Recordings, Media Library, EPG, Multiview, Watchfolders, Analytics.
- The two signature workflows are written with an arrow: **Live → VOD** and **VOD → Live**. In plain text where the arrow is not available, write "Live to VOD" and "VOD to Live".

Voice

Volt talks like a senior broadcast engineer who respects the operator's time.

- **Plain and specific.** Say what happens: "Recording starts when the channel goes on air", not "Seamlessly capture your content".
- **The operator's words.** On air, off air, ingest, failover, rendition, as-run, EPG, slate. Do not soften broadcast terms into consumer language, and do not invent new ones.
- **Active voice, present tense.** Buttons state the action ("Go on air", "Take off air", "Publish"). The confirmation repeats it ("On air", "Published").
- **Errors explain and fix.** "No signal on the primary input. Volt switched to the backup at 14:02:11" is right. "Oops, something went wrong" is not.
- **Calm about failure.** The product exists for the bad night. Never alarmist, never cute.
- **Spelling is UK English** (colour, organisation, programme for a broadcast programme, program for software).
- **Sentence case** for headings, buttons and menu items. Title case only for product areas and the name.
- **No emoji** in product, docs or ads. Status is carried by the pill, the dot and the word.
- Keep em dashes and semicolons rare. Prefer a full stop, a comma, a colon or brackets.

Real copy from the product, as reference: "Ready · private", "Go on air", "Take off air", "Stop listening", "Server → Input → Encoder → Output → On air".

02

Logo and app tile

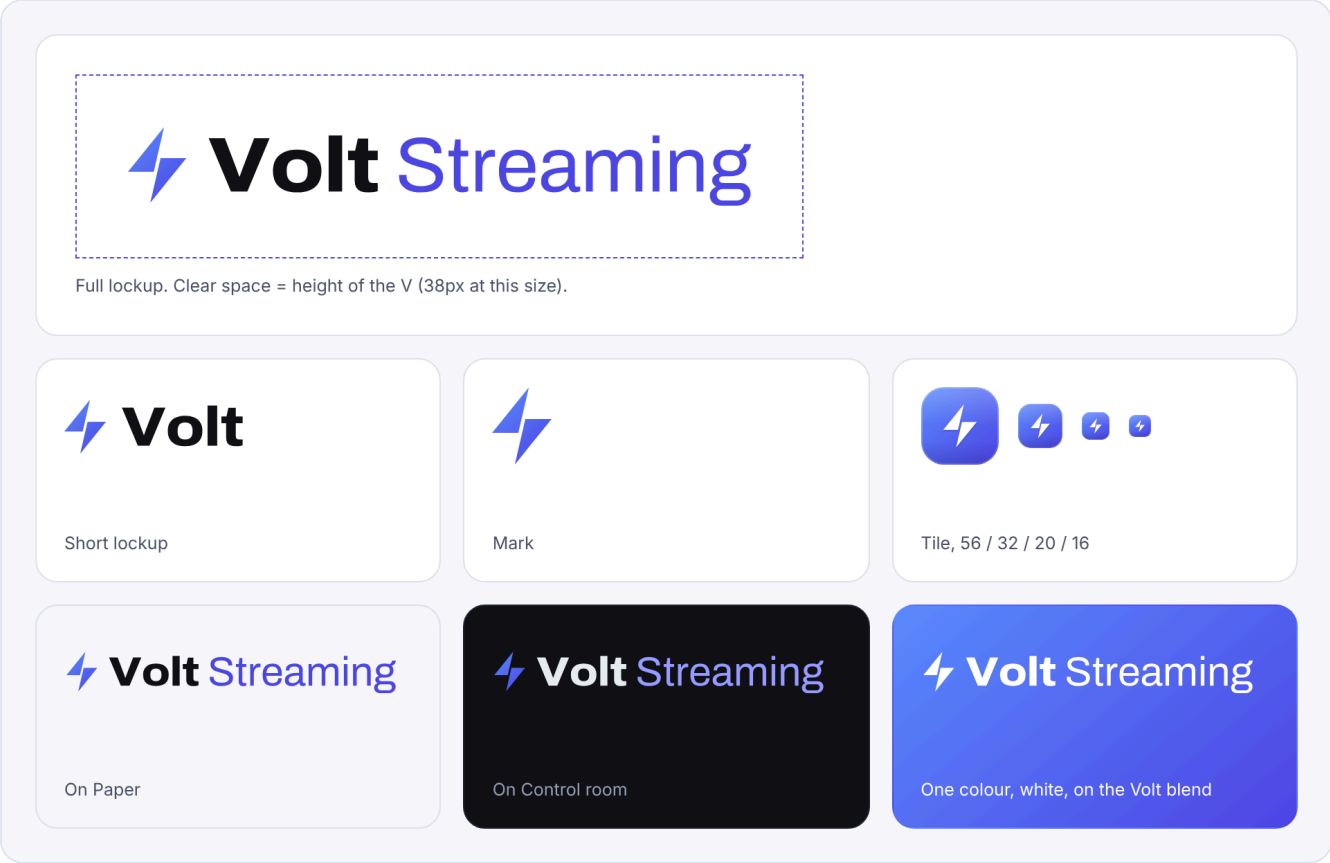

The mark is the **split bolt**: a lightning bolt cut by one steep slit into two halves. The upper half is live, the lower half is VOD, and the current runs both ways. It is drawn on a 48-unit grid and must never be redrawn, re-angled or replaced with an emoji or a generic bolt glyph.

Asset	Use
`volt-lockup-on-dark.svg`	Default. Website, product sign-in, decks, ads on `ground`.
`volt-lockup-on-light.svg`	Documents, proposals, print, anything on Paper or white.
`volt-lockup-solid-on-light.svg`	Where a gradient cannot be reproduced (one-colour spot print, embroidery, some email clients). Mark in solid `volt`.
`volt-lockup-white.svg`, `volt-lockup-ink.svg`	One-colour use: on the Volt blend, over photography, single-colour print, partner co-branding.
`volt-short-on-dark.svg`, `volt-short-on-light.svg`	Mark plus "Volt" for tight spaces: app headers, footers, slide footers.
`volt-mark.svg`, `volt-mark-solid.svg`	The mark alone, in the blend or solid `volt`, once the name is already on the page.
`volt-tile.svg`	App icon, favicon, avatar, the product sidebar. White mark on the Volt blend with top-down lighting.
`volt-tile-flat.svg`	The tile without lighting, for print and EPS.

Every logo also ships as PNG, EPS and PDF in the brand folder, and the tile ships at app-icon sizes from 16 to 1024px plus `favicon.ico`.

- **Colours.** In colour artwork the mark is always the **Volt blend** (`volt-start` #5b8cff to `volt-end` #4f46e5 at 140°), running continuously across both halves. "Volt" is `ink`, "Streaming" is `current` on Control room and `volt-end` on Paper. Nothing else may be recoloured.
- **The tile.** The blend fills a square with corners at 10/34 of its width. Light comes from above: a soft white highlight fading out by the middle, a slight indigo shade at the base, a 1px light inner edge and a soft shadow under the white mark. Under the tile use `shadow-tile`, a neutral shadow, never a coloured glow.
- **Clear space** around the lockup equals the height of the capital V. Nothing (text, image edges, other logos) enters it.
- **Minimum sizes.** Full lockup 120px wide on screen (30mm in print). Short lockup 64px (16mm). Mark alone 16px. Below 24px use `volt-tile.svg`, because the slit closes up on a bare mark.
- **Backgrounds.** Place the colour lockups only on `ground`, `panel`, white or Paper. Over photography use the white or ink one-colour lockup on a calm area of the image.
- **Do not** stretch, outline, add shadows or glows, put the mark in a circle, set the name in another face, recolour "Streaming" to match "Volt", rotate the mark or animate the two halves apart in still artwork.

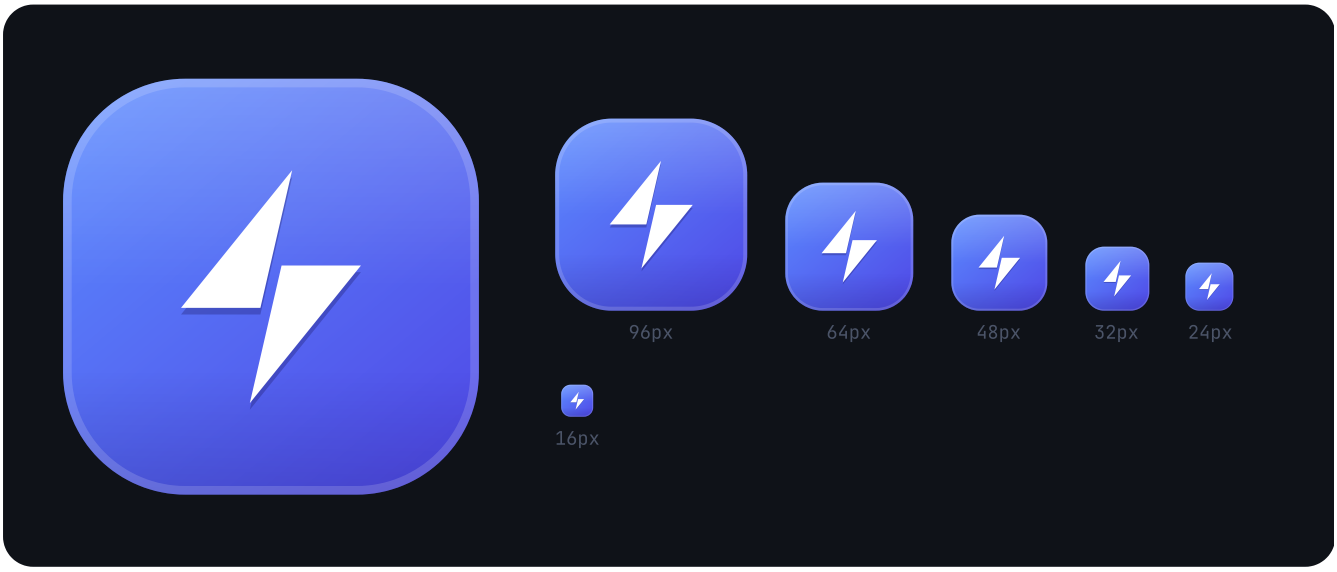

- **Co-branding.** Partner logos sit to the right of a 1px `line-strong` divider, matched by cap height, with clear space on both sides.

Lockups, mark and tile on Paper, Control room and the Volt blend.

The app tile

The tile is the Volt blend lit from above: a soft white highlight that fades out by the middle, a slight indigo shade at the base, a 1px light inner edge and a soft shadow under the white mark. It sits on a neutral shadow, never a coloured glow. Below 32px the lighting is dropped and the flat tile is used.

03

Colour

volt-start #5b8cff · Volt Blue 140° · the Volt blend volt-end #4f46e5 · Volt Indigo

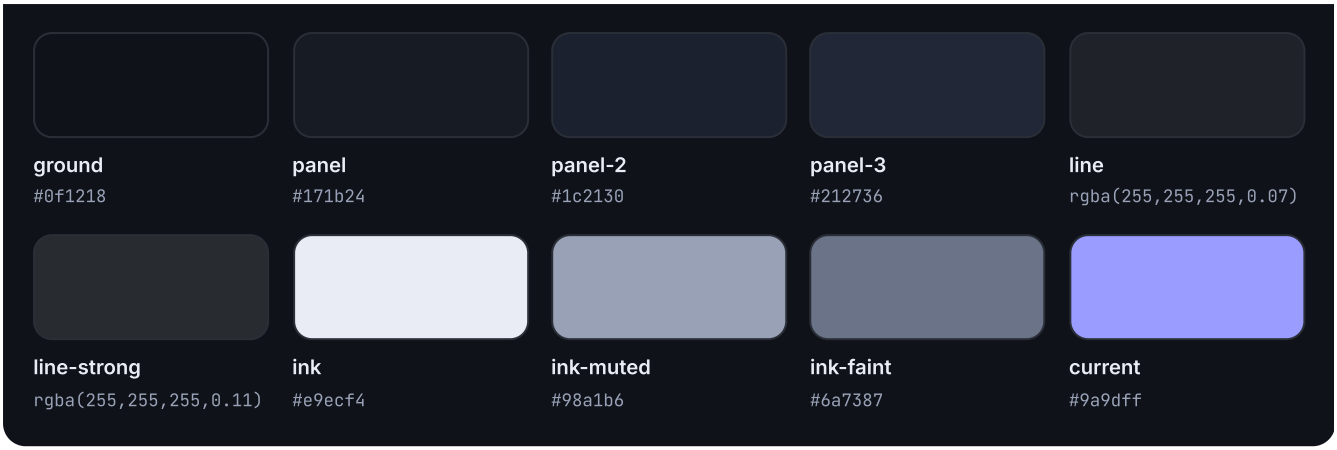

volt	volt-start	volt-end	volt-text	volt-soft
#5569f2	#5b8cff	#4f46e5	#8b9cff	#eceefe

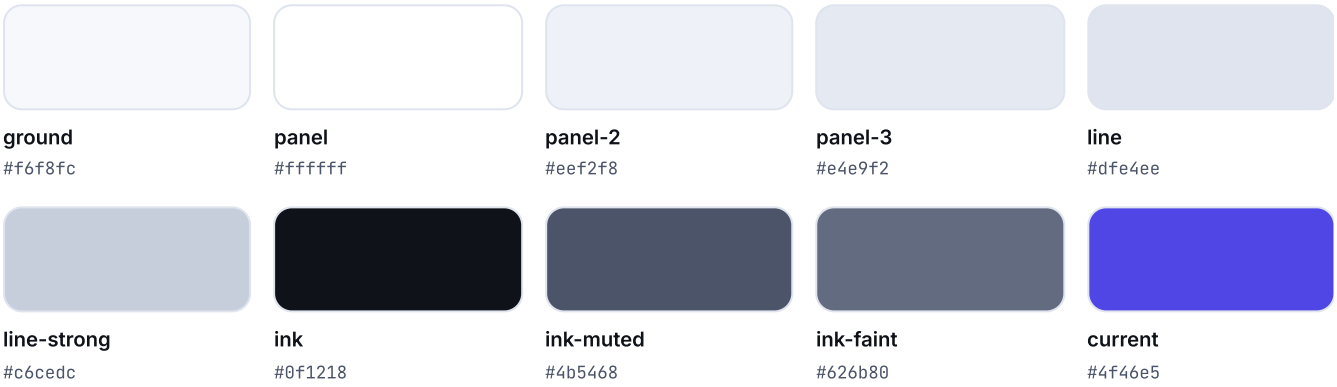

Two themes share one set of token names. **Control room** (dark) is the product and the default for marketing. **Paper** (light) is for documents, proposals and print. Build every surface from the tokens, never from a hex value typed into a slide or a stylesheet.

- **The Volt blend is the primary colour.** `volt-start` (Volt Blue #5b8cff) to `volt-end` (Volt Indigo #4f46e5) at 140°, taken from the app tile. Use it on the mark, the app tile and one hero block per layout. Never put body text on it and never use it as a page background.
- `volt` (#5569f2) is the blend's centre, the solid primary for anything that cannot carry a gradient: single-colour marks, icons, focus rings, selected states, the first chart series.
- **Proportion.** Roughly 60% `ground`, 25% `panel`, `ink` and neutrals, 10% Volt (blend or solid), 5% `current` and status colours. If more than about a tenth of a layout is Volt, it stops meaning anything.
- `ground` is the page, `panel` the card, `panel-2` the input, `panel-3` the chip. Separate them with `line`, and use `line-strong` for the boundary that must be seen.
- `ink` for body text, `ink-muted` for secondary text and meta lines, `ink-faint` only for decorative meta at 12px or more (it is below 4.5:1 in Control room and is kept to match the shipped UI).
- Words in the brand colour (links, eyebrows) use `volt-text`, never `volt` or the blend.
- Filled buttons and filled tags use `volt-strong` (Volt Indigo) with `on-volt` text (6.3:1). Do not put small white text on `volt-start`.
- `volt-soft` tints a selected row, an info banner or a highlighted diagram group.
- `current` is the second voice: "Streaming" in the wordmark on Control room and the second data series. Never a button.
- **Status colours mean state and nothing else:** `live` on air or healthy, `sched` ready or scheduled, `warn` degraded, `down` error, `idle` stopped, `filler` slates and filler content. A status colour always travels with its word and a dot (see the StatusPill component), so `live` and `down` are never told apart by hue alone.
- Focus ring: 2px solid `volt` with a 2px offset. It holds 3:1 on every surface in both themes.

Control room

Paper

Status

Each chip shows the Control room value above the Paper value.

Typography

Archivo · display

Go live. Stay live.

ABCDEFGHIJKLMNOPQRSTUVWXYZ abcdefghijklmnopqrstuvwxyz 0123456789

Inter · text

When the primary input drops, Volt switches to the backup within one segment and logs the switch on the channel timeline.

ABCDEFGHIJKLMNOPQRSTUVWXYZ abcdefghijklmnopqrstuvwxyz 0123456789

JetBrains Mono · data

`00:59:58:12  srt://ingest.example:9000`

SRT · RTMP · HLS · DASH · 1920×1080 · 50p · 6 Mb/s

Archivo is a variable font with weight (100 to 900) and width (62 to 125) axes. Volt uses only these settings:

- **Headlines and slide titles:** weight 800, width 112, tracking -2%, line height 0.92 to 1.0.
- **Document headings:** weight 700, width 100 (normal), tracking -1%.
- **Eyebrows:** weight 600, width 112, uppercase, tracking +14%.
- **The wordmark** is outlined artwork (Volt at 800/112, Streaming at 400/100). Never retype it.

On the web set the width with `font-variation-settings: "wdth" 112`. In desktop apps install the static fonts from the brand folder, where *Archivo Expanded ExtraBold* is the 800/112 cut.

Scales

Marketing

`display-xl`
88px / 800

Go live. Stay live.

`display-l`
64px / 800

Every live hour becomes a library.

`display-m` 44px / 800	**Turn your archive into a channel.**
`headline` 32px / 700	**Live → VOD in one take**
`eyebrow` 12px / 600	LIVE TO VOD
`deck` 20px / 400	Record every channel as it airs and publish clips while the match is still on.

Documents

`doc-title` 34px / 700	**Volt Streaming platform overview**
`doc-h1` 24px / 700	**Live channels and failover**
`doc-h2` 18px / 600	**Primary and backup inputs**
`doc-h3` 15px / 600	**Supported ingest protocols**
`doc-body` 15px / 400	When the primary input drops, Volt switches to the backup within one segment and logs the switch on the channel timeline.
`doc-caption` 12.5px / 400	Figure 2. Signal path for a live event with a backup encoder.

Interface

`ui-h1` 23px / 700	**Sky Sport Live**
`ui-h2` 15px / 600	**Output renditions**
`ui-h3` 14px / 600	**Viewers now**
`ui-body` 13px / 400	Recording starts when the channel goes on air.

`ui-sm` 12.5px / 400	Last switch to backup 14:02:11
`ui-tag` 11.5px / 600	**ON AIR**
`ui-label` 11px / 600	**INPUTS**
`ui-micro` 10.5px / 500	Encoder · 3 renditions

Data

`timecode` 13px / 500	`00:59:58:12`
`code` 12.5px / 400	`srt://ingest.example:9000?streamid=ch2`
`data-sm` 11.5px / 500	`SRT · HLS · DASH`

Office documents and slides

Install the desktop fonts first (Archivo, Archivo Expanded, Inter and JetBrains Mono, from the brand folder or Google Fonts). Then map the styles:

Word / PowerPoint style	Font	Size	Colour
Title	Archivo Bold	26pt	`ink`
Heading 1	Archivo Bold	18pt	`ink`
Heading 2	Archivo SemiBold	13.5pt	`ink`
Heading 3	Inter SemiBold	11pt	`ink`
Normal / body	Inter	10.5pt, 1.5 spacing	`ink`
Caption, table text	Inter	9pt	`ink-muted`
Code, URLs, timecode	JetBrains Mono	9pt	`ink`
Slide title	Archivo Expanded ExtraBold	32 to 40pt	`ink`
Slide eyebrow	Archivo Expanded SemiBold, all caps, +14% spacing	10pt	`volt-text`
Slide body	Inter	16 to 20pt	`ink-muted`

When the fonts cannot be embedded (a file sent to a customer who will edit it), choose **Embed fonts** in Office. If that is not possible, Arial replaces Archivo and Inter, and Consolas replaces JetBrains Mono. Never substitute a script, slab or condensed face.

Rules

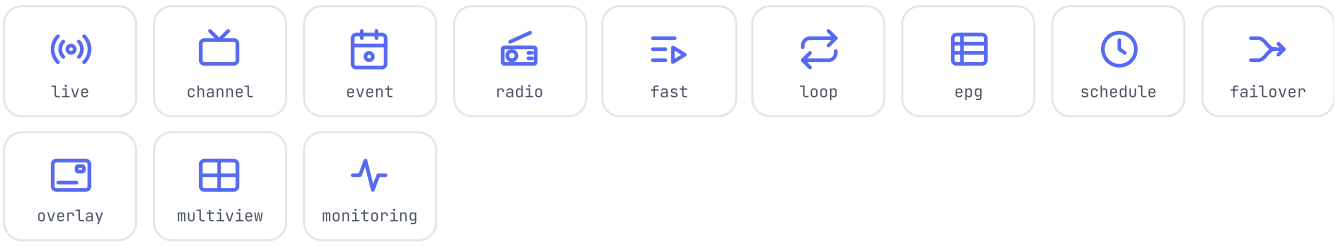

- Headlines are short and set in sentence case: "Every live hour becomes a library."
- Do not set body copy in Archivo or headlines in Inter.
- Numbers that line up (timecode, bitrates, viewer counts, prices) use tabular figures: `font-variant-numeric: tabular-nums` in CSS, or JetBrains Mono.
- Timecode is always `HH:MM:SS:FF` in mono, for example `00:59:58:12`. Bitrates are written `6 Mb/s`, resolutions `1920×1080`, frame rates `50p` or `59.94i`.
- Line length for running text is 60 to 75 characters.
- Left-align everything except single-line display text on a marketing panel.

05

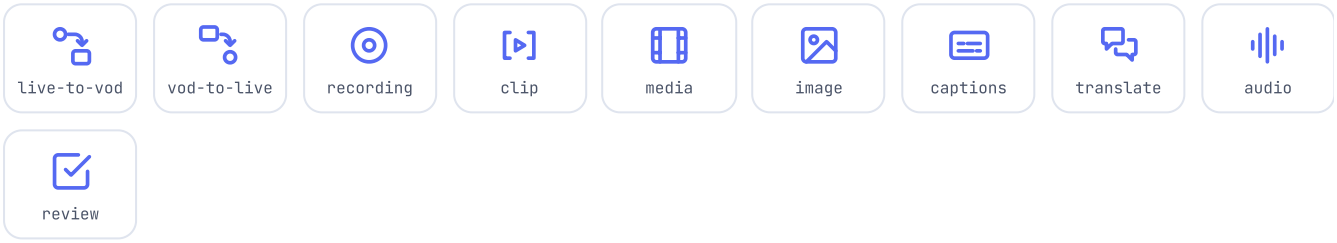

Icons

The Volt icon set is one family of 51 line icons, drawn for the product and reused unchanged in diagrams, documents, slides and marketing. The set extends the icons already shipping in the app sidebar, so a channel in a diagram looks like the Channels item an operator clicks.

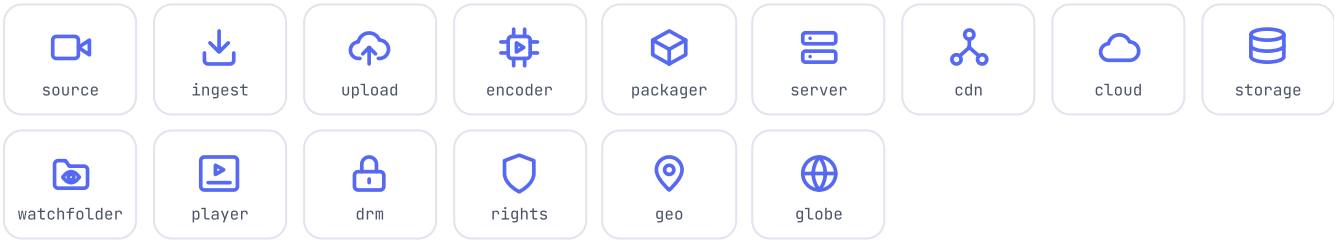

BROADCAST

MEDIA

PIPELINE

AUDIENCE

PLATFORM

Construction

- **Grid:** 24 × 24 with a 2-unit live area margin. Nothing touches the edge.
- **Stroke:** 2 units, round caps, round joins, no fills. Dots are zero-length round-capped lines.

Colour

- In the product icons take `currentColor` and inherit the text colour of their control.
- In diagrams and on slides icons are `volt` on a `panel` node, or `ink` when the diagram is one colour.

- **Corners:** 2 units on rectangles, 1 to 1.5 on small rectangles and servers.
- **Perspective:** flat and front-on. No isometric views, no shading, no second colour inside an icon.
- New icons must be drawn on the same grid with the same stroke, and added to every colourway.
- On a `volt-strong` fill, icons are `on-volt`.
- Status is never shown by colouring an icon. Pair the icon with a StatusPill.

The files in the Icons asset group are coloured `volt` (#5569f2) so they read on both themes. The brand folder also holds every icon in `currentColor`, `ink` (#0f1218) and white, plus a single SVG sprite, PNGs for Office and EPS for print.

Sizes

Context	Size	Stroke as drawn
Interface buttons	15px	2
Navigation, icon buttons	18px	2
Default UI and documents	20 to 24px	2
Diagram nodes	28px inside a 56px node	2
Slides and marketing	32 to 48px	2, or 1.5 above 40px

Above 48px the stroke gets heavy. Use the icon inside a node or tile instead of scaling it up.

Naming and use

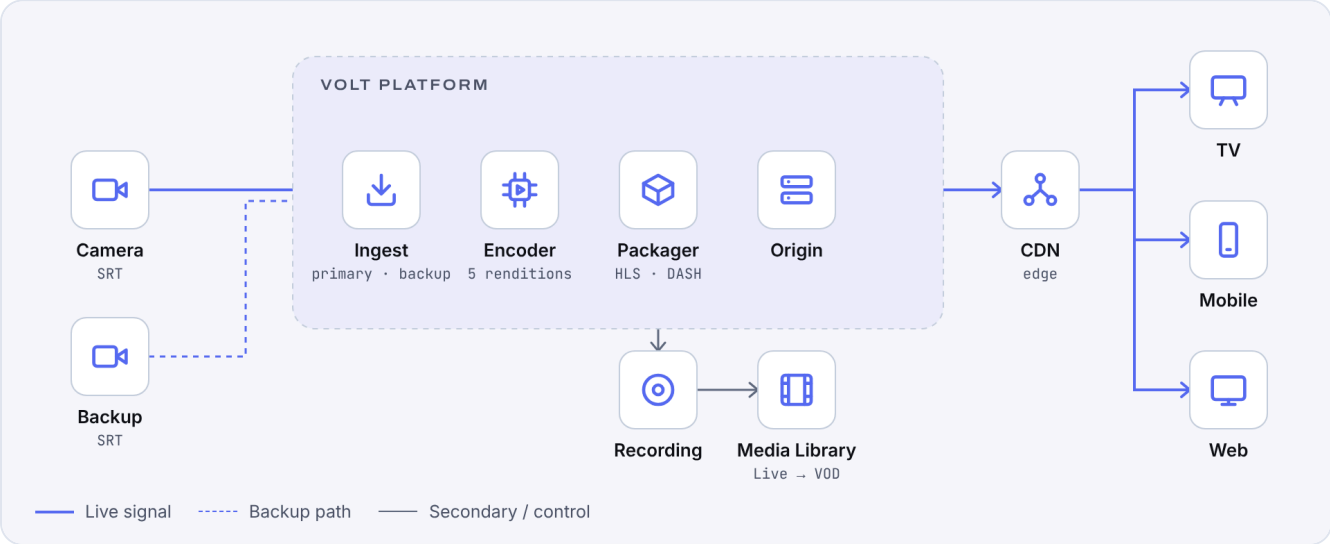

- File names are the icon name in kebab case: `live-to-vod.svg`. In the sprite each symbol id is `volt-<name>`.
- Use one icon for one concept everywhere. `server` is the origin, `cdn` is edge delivery, `globe` is "worldwide" in marketing.
- Protocols and formats (SRT, RTMP, NDI, HLS, DASH, CMAF) are not icons. Write them as protocol tags in mono.
- Third-party services (cloud providers, social networks, DRM vendors) use their own official brand marks, never a Volt-style redraw.
- Icons support a label. Except in the product's icon-only buttons, which carry a tooltip, always set the word beside or below the icon.

06

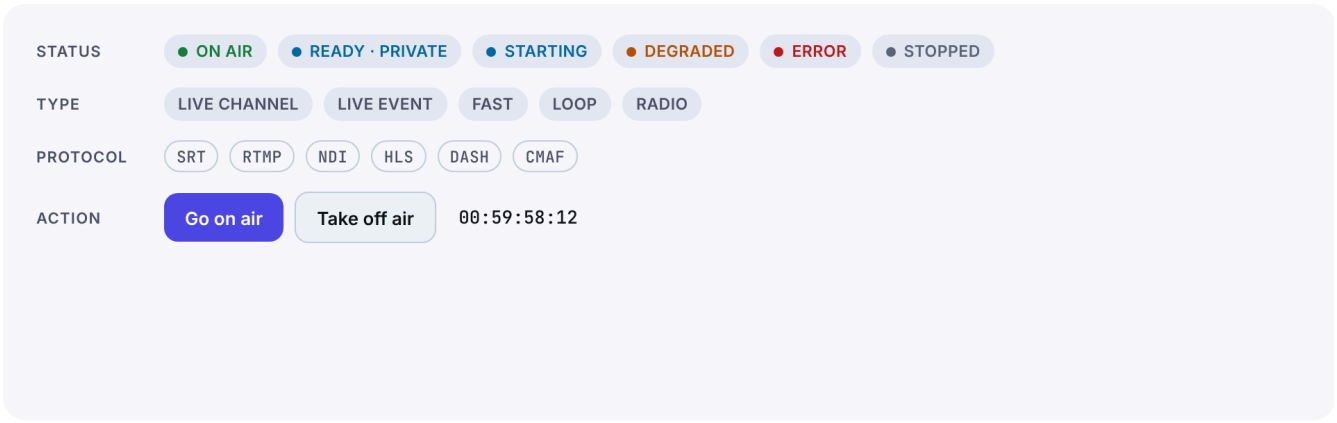

Diagrams

A Volt diagram is a picture of signal flow, not a page of boxes with paragraphs in them. Each node is an icon with a short label. The reader should follow the signal with their eye before reading a word.

- **Direction.** Signal flows left to right. Control and management sit above the flow, storage and archive below it. Audiences and devices are always on the right.
- **Nodes.** A 56px `panel` tile with `radius-tile` corners and a 1px `line-strong` border, a 28px `volt` icon in the centre, the label under it in `ui-body` semibold `ink`, and at most one detail line under that in `data-sm` `ink-muted` (a protocol, a count or a region). No more than 7 nodes in a row.
- **Connectors.** The live signal path is a 2px `volt` line. Secondary and control paths are 1.5px `ink-faint`. A backup or failover path is dashed (4 on, 4 off). Arrowheads are small open chevrons. Lines run straight or with right-angle turns, never diagonally.
- **Groups.** A boundary (a cloud region, a customer site, "Volt platform") is a 1px dashed `line-strong` rectangle with `radius-card` corners, labelled top-left in the eyebrow style in `ink-muted`. Tint at most one group with `volt-soft` to show where Volt is.
- **Labels on lines** are protocol tags (SRT, HLS, DASH) in mono, centred on the line on a `ground` knock-out.
- **Status** in a diagram uses the StatusPill colours and words. A red line on its own means nothing.
- **Background.** Control room for decks and the web, Paper for documents and print. Never place a diagram on a photograph.
- Customer-facing diagrams show what Volt does, not how it is built. Leave out internal service names, hostnames, ports, table names and instance sizes.

A Live → VOD signal-flow diagram on Paper.

Status, type and protocol tags.

07

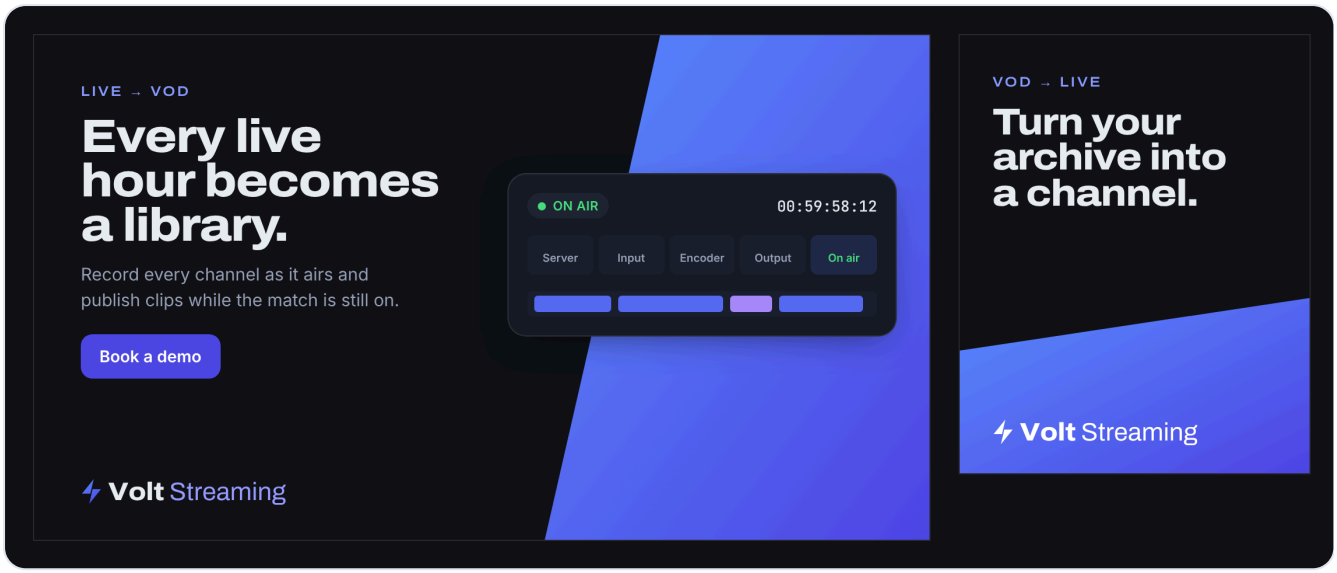

Slides, documents and advertising

Slide decks

- 16:9, `ground` background in Control room. Paper is acceptable for dense data appendices.
- Margins `space-16` (64px at 1920 wide). Content aligns to the left margin.
- **Title slide:** short lockup top-left, eyebrow, one display line, a deck line, and a product screen or one block cut by the slit on the right.
- **Content slide:** eyebrow, title in Archivo Expanded ExtraBold, then one idea: a screen, a diagram, three facts or a quote. Never a wall of bullets. Five bullets is the ceiling.
- **Footer:** the short lockup at 24px high bottom-left, a page number in `data-sm` bottom-right, and nothing else.
- Charts: `volt` for the first series, `current` for the second, `ink-muted` for comparison. Status colours only for status.

Advertising and social

- **One message per piece.** An eyebrow that names the workflow, a headline, one line of deck and a call to action. The lockup always appears.
- **Proven headlines** that carry the two signature workflows: "Go live. Stay live." "Every live hour becomes a library." "Turn your archive into a channel." "Live → VOD in one take."
- **Call to action** is a `volt-strong` button shape with `on-volt` text, in sentence case: "Book a demo", "Start a trial", "See it live".
- **Formats.** 16:9 (1920×1080) for video and web heroes, 1:1 (1080×1080) and 4:5 (1080×1350) for social, 1200×628 for link cards, and 300×250 / 728×90 for display ads, where the short lockup replaces the full one.
- **Composition.** `ground` field, one Volt blend block (optionally cut by the slit), the product screen or a photograph, the type left-aligned on the ground, never on the blend. Keep a `space-12` safe area on every edge for social crops.
- **Motion.** The only brand animation is the slit: the two halves of the mark arrive from opposite directions along the slit and lock together in 400ms with an ease-out. Use it as an intro or outro sting, never as a loop.
- **Video and lower thirds.** Name in Archivo 700, role in Inter 400, on a `panel` bar with a 4px `volt` square to the left of the name. Safe-title area 10% of frame height.

A 16:9 hero and a 4:5 social post.

Documents

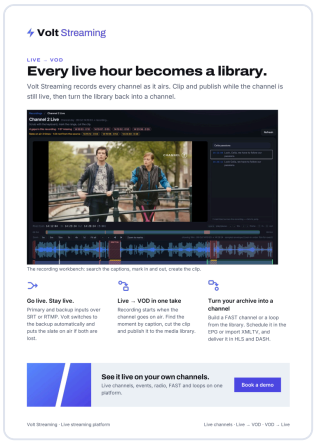

Documents come in three styles: Paper for documents people edit, the Briefing sheet for one-page summaries and the Report for overviews and proposals. Section 08 sets out each one.

08

Document styles

Volt documents come in three styles. All three use the same name rules, colours, fonts and logo. They differ in how much Control room they carry, and that decides when to use each. The Briefing sheet and the Report have both had good feedback from readers. Use them for anything that represents Volt to a prospect or partner.

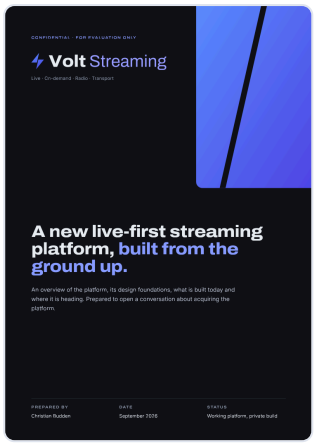

Style	Look	Use it for	Start from
Paper	All light. Full lockup on the cover, short lockup in the header, one Volt blend band on the cover only.	Working documents people edit: specs, requirements, SoWs, user guides, internal one-pagers, anything that will be printed in black and white.	`Volt_Word_Template.dotx`, `Volt_One_Pager.docx`
Briefing sheet	One A4 page. A Control room band across the top holds the lockup, the document type, the date and confidentiality line, the headline and a lead paragraph. Below it, Paper content in tight modules, with one dark panel in the middle or lower third for a proof strip or illustration.	Platform summaries, solution briefs, pricing and cost explainers, event handouts. One subject, read in two minutes.	`templates/html/Volt_Briefing_Sheet_Template.html` (from the Distribution and running cost sheet)
Report	Multi-page A4. A full Control room cover with the lockup, eyebrow, headline, deck, metadata row and one Volt blend block cut by the slit. Inside, Paper pages with an eyebrow and title at the top, two-column text, tinted side boxes, stat tiles and full-width product screens with captions.	Platform overviews, proposals, investor and partner packs, design summaries.	`templates/html/Volt_Report_Template.html` (from the Platform Overview)

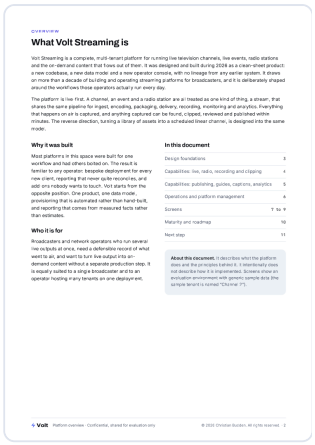

Paper

Briefing sheet

Report: cover

Report: inside

Shared rules

- **Page:** A4, edge to edge. Content margin 13mm on briefing sheets, 18mm on reports and Paper documents.
- **Type:** headlines in Archivo (heavy, slightly extended, sentence case), body in Inter at 7.5 to 9pt on a briefing sheet and 9.5 to 10.5pt in a report, numbers and page numbers in JetBrains Mono.
- **Eyebrows** sit above every section: Archivo semibold, uppercase, tracked +14%, in `volt-end` on Paper and `volt-text` on Control room.
- **Headline accent:** a briefing sheet or report headline may set its second clause in `volt-text`, for example "Servers follow the streams. *Cost follows the work.*" Use it once per page.
- **Footer:** the confidentiality line on the left and the © or page number on the right, in `ink-faint` at 6.3 to 7pt above a 1px `line` rule. Reports also put the short lockup at the start of the footer.
- **Never** put a thick coloured rule down one edge of a tile, box or stat. Separate with tone, a hairline on top, or a 1px outline.

Briefing sheet anatomy

1. **Band** (Control room `ground`, about the top 18% of the page). Row one has the lockup on the left with a short descriptor after a 1px divider ("Distribution and running cost", "Live · On-demand · Radio") and the meta block on the right in uppercase tracked `ink-muted`: document type, month and year, and **Confidential** in `volt-text`. Then the headline at 19 to 20pt in white and a lead paragraph in a light grey (#c9cfdc). A soft Volt-tinted light in the top-right corner of the band is allowed in this style only.
2. **Lead module:** either two routes side by side in `panel-2` boxes with a dark icon tile, or a four-step numbered flow (01 to 04, numbers in `volt-text`) with small arrows between the steps.
3. **Capability grid:** three columns. Each item has a hairline on top, a 4mm `volt` icon beside an Inter semibold title, and two to four lines of text.
4. **Dark panel:** one Control room panel per sheet. It is either a proof strip of four big numbers (JetBrains Mono or Archivo, units in `volt-text`) or a small illustration such as a server pool with tagged chips and load bars.
5. **Lower section:** two columns. One holds "Why it is ahead" or "Built for real deployment" prose, the other a dotted list of what comes next, ending with a one-line call to action and the author's name.
6. **Legal line** at the foot of the page.

Report anatomy

- **Cover:** Control room `ground` and the colour lockup on dark, top-left. Below it a confidentiality eyebrow and a descriptor line, then a two-to-three-line headline with the second half in `volt-text`, and a deck paragraph. A metadata row along the foot (Prepared by, Date, Status) is set in eyebrow labels over Inter values. One Volt blend block bleeds off the top-right, cut by the slit.
- **Contents and introduction** share page 2: the introduction in two columns on the left, "In this document" as a ruled list with page numbers in mono on the right, and an "About this document" note in a `panel-2` box.
- **Content pages:** an eyebrow (OVERVIEW, CAPABILITIES, SCREENS, MATURITY, NEXT STEP), then the page title in Archivo bold at about 20pt. Cards in a two-column grid with 1px outlines, and the one key point of the page in a `volt-soft` box.
- **Screen pages:** one or two full-width product screens per page, each with a caption that opens with the screen name in bold.
- **Maturity or stats page:** a 3 × 2 grid of outlined stat tiles with the figure in JetBrains Mono at about 22pt and a two-line label in `ink-muted`.
- **Closing page:** a short invitation, the author's name and date, and the confidentiality note in a `panel-2` box.

Choosing

- If the reader will edit it, use **Paper**.
- If it must make the case on one page, use a **Briefing sheet**.
- If it needs more than two pages and represents the product, use a **Report**.
- Keep all three in the same document set: a Report can travel with a Briefing sheet as its summary, and Paper specs can follow as appendices.

09

Space, shape and imagery

Space, shape and depth

- Spacing runs on a 4px base: `space-1` 4, `space-2` 8, `space-3` 12, `space-4` 16, `space-5` 20, `space-6` 24, `space-8` 32, `space-12` 48, `space-16` 64. Lay out with gaps, not margins.
- Corners follow the product: `radius-xs` for progress bars and ticks, `radius-ctl` for buttons and inputs, `radius-tile` for thumbnails and diagram nodes, `radius-card` for cards and panels, `radius-pill` for status pills. Marketing blocks and print use the same values. Do not round things that are not objects (rules, dividers, full-bleed images).
- Separate with tone first, a 1px line second, and shadow last. `shadow-card` is for cards on `ground` and `shadow-tile` is for the app tile. No glows, no gradients on surfaces other than the Volt blend, no coloured edge bars on cards.

Imagery

- **Product screens are the hero.** Show the real UI in Control room, cropped to the part that tells the story (the five-gate strip, the timeline, a channel monitor). Use demo tenants and demo channels, never a real customer's names, URLs or data.
- **Photography** is real broadcast work: control rooms, outside broadcast trucks, commentary booths, stadiums at night, radio studios. Cool and low-key, lit by screens. No stock people pointing at laptops, no glowing globes, no abstract "data" swooshes.
- **The slit** is the only graphic device. The mark's 6:26 diagonal (about 77°) may cut a colour block, crop a photo edge or split a before/after pair. Use it once per layout.

10

Files and templates

Everything lives in `volt/brand/` in the project. The live, editable version of this guide is the Volt Streaming design system.

Folder	What
`logos/svg`, `logos/eps`, `logos/pdf`	Every lockup, the mark, and the flat tile as vector artwork. EPS and PDF for print and design tools.
`logos/png`	Lockups at 1200px wide, marks and tiles at 512px.
`logos/app-icon`	The lit tile at 16 to 1024px, `favicon.ico` and `favicon.svg`.
`icons/svg/{currentColor,volt,ink,white}`	51 icons in four colourways.
`icons/png/*`, `icons/eps/*`	The same icons as 96px PNG and as EPS.
`icons/volt-icons.sprite.svg`	One sprite with every icon and the mark, ids `volt-<name>`.
`fonts/web`, `fonts/desktop`	Variable WOFF2 for the web, static TTF to install for Office.
`tokens`	`volt-tokens.css` and `volt-tokens.json`: colours, gradients, type, spacing, radii.
`templates`	PowerPoint template and sample deck, the style guide deck, Word template and sample document, one-pager.
`templates/html`	Briefing sheet and Report templates as HTML: print to A4 PDF from Chrome with margins none and background graphics on.
