Status	Draft

TEMPLATE GUIDE

How to use this template

This template carries the Volt Streaming styles for proposals, specifications, user guides and other Paper documents. Replace the guidance on these pages with your own content, and keep to the named styles so every document reads as one family.

Before you start. Install the brand fonts (Archivo, Archivo Expanded, Inter and JetBrains Mono) from the brand folder. Without them Word substitutes Arial and Consolas.

Cover page

The first page has its own layout and no header or footer. Change the eyebrow to the document type, write the title in sentence case, and fill in the metadata table. Leave the Volt blend band at the bottom of the cover as it is, and never put text on it.

1. Replace “Document type” with a short label such as “Proposal” or “User guide”.
2. Replace the title and the one-line subtitle.
3. Fill in Version, Date, Author and Status.
4. Change “Document title” in the page header (double-click the header on page 2).

Paragraph styles

Pick styles from the Styles gallery rather than formatting text by hand. The table lists every Volt style and when to use it.

Style	Use it for	Set in
Title	The document title on the cover	Archivo Bold 26 pt
Subtitle	The line under the title	Inter 13 pt, ink-muted
Eyebrow	A short label above a heading	Archivo Expanded SemiBold 9 pt, caps
Heading 1	Main sections (they start the contents)	Archivo Bold 18 pt
Heading 2	Sections inside a main section	Archivo SemiBold 13.5 pt
Heading 3	Small headings and run-in topics	Inter SemiBold 11 pt
Normal	Body text	Inter 10.5 pt, 1.5 lines
List Bullet, List Number	Lists of three to seven items	Inter 10.5 pt
Quote	A short quotation from a customer or operator	Archivo Medium 13 pt
Callout	Notes, warnings and key facts	Inter 10 pt on volt-soft
Code	Stream URLs, keys, commands and timecode	JetBrains Mono 9 pt

Style	Use it for	Set in
Caption	Under every figure and table	Inter 9 pt, ink-muted
Table Text	Text inside tables (used by Volt Table)	Inter 9 pt

Table 1. Volt paragraph styles.

Headings

Write headings in sentence case and keep them short. Heading 1 and Heading 2 appear in the contents. Use an eyebrow above a Heading 1 when it helps the reader find their place, for example the name of the workflow.

This is Heading 3

Use Heading 3 for small topics inside a section. Do not go deeper than three levels.

Lists

Use List Bullet for items in no particular order:

- Live channels, live events and radio stations
- FAST channels and loops
- Recordings and the media library

Use List Number for steps an operator follows in order:

1. Add the primary and backup inputs.
2. Check that every gate in the pipeline strip is healthy.
3. Select Go on air.

Quotes, callouts and code

> [A short quotation from a customer or an operator, set in the Quote style.]

Callout. Use the Callout style for a note the reader must not miss. Keep it to two or three sentences. It sits on volt-soft and never carries a coloured edge bar.

Use the Code style for anything an operator compares character by character, and the `Inline Code` character style inside a sentence:

```
srt://ingest.example.com:9000?streamid=channel-2
00:59:58:12
```

Figures and tables

Place product screens in the Figure style (centred, no border) and add a Caption under each one. For tables, insert a table and choose Volt Table from the Table Design gallery: it gives a panel-3 header row, 1 px rules between rows and no vertical rules.

Placeholder. [Insert a figure here. Crop product screens to the part that tells the story and use demo channel names only.]

Figure 1. [Describe what the figure shows in one sentence.]

Writing for Volt

- Write “Volt Streaming” on first mention and “Volt” after that.
- Use UK spelling and the operator's words: on air, ingest, failover, slate, EPG.
- Say what happens, in the active voice and present tense.
- Keep em dashes and semicolons rare. Use a full stop, a comma, a colon or brackets.
